		Client returned phone call when I was already in surgery starting Jax's Castration / Hernia Repair : Lindsay explained to owner on phone what I had said regarding very small discrete flattened Cutaneous Mass on upper lip --- TOO SMALL TO ASPIRATE ACCURATELY - onlu option would be to do EXCISION W/ BIOPSY and advised owner most likely a scar would form --- owner elects to not do anything at this time of surgery today ---- I spoke to owner after surgery when Jax waking up - told her I think this small flattened Mass IF it is a histiocytoma, papilloma, etc may spontaneously resolve on its own . It is appropriate to wait a few months and see --- owner agrees - she will watch to see if it grows, etc and inform us if it gets bigger Dr Ryan

Owner called back. Explained to her regarding growth on lip- Dr. Ryan is unable to get a good enough sample for a cytology since it is so small , however she could do a biopsy- but since that is more intrusive pet would likely end up with scar. Owner ultimately declined bx- will monitor growth for now...LJ

Pet presented for cast + hernia repair
Pet was fasted this AM
No concerns at this time
Owner says pet has growth on lip- was seen at another Banfield for it and was prescribed medication, however has grown in size since. Wants to know if it were possible to get it tested today- did explain to owner that it may be too small to get a good sample of, however I will discuss with Dr. Ryan and let her know if she feels it is possible.
